

## Changeless Change

Pull the Weeds  
(while they are still small)

Tending to our gardens includes pulling up the weeds at the root while they are still small enough to easily handle.

Initially, pulling new weeds is actually more about trying to look good on the surface. But, if we just mow down the weeds when we mow the lawn, what usually happens? Underneath the surface, the weeds are spreading like fire. They are spreading, and getting thicker and stronger. Wow. All too soon there is a serious problem and tons more work to do because the weeds have overgrown the lawn. No more faking it now. No more looking good on the surface – the jig is up!
